

Rosh OB/GYN Ultrasound provides a full range of obstetric & gynecologic diagnostic services.

Our team also has world-class expertise in treating high-risk women's health conditions and pregnancies. Our model consists of three primary components — compassionate care, experienced experts and cutting-edge technology. This includes the most advanced and innovative ultrasound equipment, enabling us to offer regular 2D, as well as advanced 3D and 4D imaging, which produce three-dimensional and live streaming images of the baby's movement. Please visit RoshMFM.com for a full list of services.

Rosh OB/GYN Ultrasound is a division of Rosh Maternal & Fetal Medicine, a multi-state practice led by Daniel Roshan, MD, FACOGS, FCS, OB/GYN.

Daniel F. Roshan, MD, FACOG, FACS, OB/GYN

Dr. Roshan oversees a team of premier maternal fetal medicine providers to deliver the world-class care that patients deserve. Dr. Roshan is Board certified in both obstetrics and gynecology, as well as in maternal-fetal medicine. An expert in high-risk pregnancies, Dr. Roshan has more than 20 years of experience and is renowned in New York City and beyond. Dr. Roshan specializes in recurrent pregnancy losses, preterm labor, multiple pregnancies, thrombophilia during pregnancy, and a multitude of other fertility and pregnancy concerns. He also offers experienced medical care for women faced with chronic disease during pregnancy. Dr. Roshan is a fellow of the American College of Obstetricians and Gynecologists as well as the American College of Surgeons.

Delivering premier ultrasound services for area practices

**Rosh OB/GYN
Ultrasound**

A Division of Rosh
Maternal & Fetal
Medicine OB/GYN

We are a tremendous resource for OB/GYN practices with no (or limited) ultrasound capabilities.

Rosh OB/GYN Ultrasound has simplified the ultrasound process, making it easier to provide this service and care to as many patients as possible.

Quality

Led by Dr. Daniel Roshan, MD, a Board certified OB/GYN and maternal fetal medicine doctor, our team of providers are among the best in the country. We have extensive experience and expertise in all MFM services, especially ultrasound. Our highly-trained and skilled ultrasound technologists and sonographers ensure all imaging is of the highest quality, and all ultrasounds are read by accredited MFM providers. All reports are completed and submitted within 24 hours of the patient's appointment, and our MFM providers are available for consultations with both physicians and patients, as needed. We work with your team to help provide the best planning and care for every patient.

Convenience

We provide all ultrasound staffing, equipment and service, and set it up in your office. This is not only convenient for your staff but also for your patients, who no longer have to be referred out of office to an imaging facility or hospital for ultrasound services. Our team is also responsible for any equipment maintenance, so that is one less issue for your staff to focus on. All your practice needs to do is provide the space, which **Rosh OB/GYN Ultrasound** will rent at fair market value, and we do the rest.

Technology

Ultrasound technology is constantly evolving and equipment upgrades are frequently introduced. It can be a challenge for many practices to stay current. At **Rosh OB/GYN Ultrasound**, we have a relationship with GE that ensures we have the newest and most innovative equipment available on the market at all times. This removes the burden on your practice for keeping up with equipment upgrades, saving both time and money.

All imaging equipment is supported by the **ViewPoint™** patient recording and archiving system and features the trophon® EPR high-level, environmentally-safe probe disinfection system.

Voluson ultrasound systems offer innovative technology such as Speckle Reduction Imaging that helps improve contrast resolution; CrossXBeam™ to enhance border definition and image clarity; and automation tools such as SonoBiometry and SonoL&D™ to improve workflow efficiency for labor progression, fetal heart examination and follicular assessment. Scan Assistant is a customizable feature that helps increase exam consistency.

We are committed to delivering the best possible care for all patients, and we want to help your practice do the same.

At **Rosh OB/GYN Ultrasound**, we use industry-leading **Voluson** ultrasound equipment and products from **General Electric Company (GE)**. The innovative equipment we offer is the same that we use in our own practice. **These include the following:**

▶ **Voluson E6**

Equipped with Radiance System Architecture and HDlive™ technology, the Voluson E6 provides exceptional visualization and unprecedented depth and clarity. The Radiantflow™ enhances color Doppler. The E6 has 2D and 3D/4D imaging capability.

▶ **Voluson E10**

The Voluson E10 features faster ultrasound pathways for spectacular 2D and 3D/4D images for increased penetration and clarity, as well as 10 times faster data transfer rates for higher resolution and frame rates.

▶ **Voluson P8**

Built on Voluson Core Architecture, the Voluson P8 delivers excellent clarity and detail in 2D and 3D/4D images. The P8 allows for superb sensitivity into anatomy and function, and provides consistent imaging even for difficult-to-image patients.

▶ **Voluson S8**

The Voluson S8 features Advanced Volume Contrast Imaging (VCI) with OmniView technology, making it easier to view irregularly-shaped structures. The S8 also allows for the adjustment of slice thickness on 3D/4D images to help enhance contrast resolution, then obtain any plane from a 3D or 4D volume by simply drawing a line, curve, poly-line or trace on anatomy.
